

Katie L. Williams Bio:

Katie has been a public health nurse with Montgomery Township Health Department since 2019. In this role, she coordinates communicable disease investigation and mitigation efforts, facilitates access to care for populations at risk for health disparities, and provides education within the community on communicable disease and chronic disease prevention. Prior to working in public health, Katie worked within a hospital-based infection prevention and control department helping with healthcare-associated infection surveillance and quality improvement projects.

Nursing is a second career for Katie. Before graduating from New York University's Accelerated Bachelor of Science in Nursing program, Katie worked for 8 years in biomedical research with a focus on immunology and infectious diseases. She also holds a Master of Science in immunology degree from the University of Pennsylvania and a Bachelor of Science in biology degree from the University of New Hampshire.

Working as a public health nurse has allowed Katie to combine her interests in infectious disease and chronic disease prevention with nursing practice to provide services at both the individual and community levels. This work has truly been rewarding and Katie is proud to be in the public health workforce serving our communities.
